Problem:

Many people who are new to board games find it difficult to understand complex rules and lengthy instruction manuals. As a result, they often spend a long time learning the rules before playing and may make mistakes during the game. There is a need for a more interactive and easy to understand way to learn board games.

Who got this problem:

People who are interested in trying out board games but don't know the rule

Why is it important / Now, what has this caused him to lose:

The important thing is, if you don't know the rules of the game, you can't play . If players go to a board games cafe, they'll waste time without even getting a chance to play. If they buy a games but can't understand the rules, they'll have wasted their money.

Gate 1 : Real users

1.Miss Thokwan Treelao / A person who plays board games and learns the rules from the manual.

How contacted: Saw a friend playing a board game, so I went to ask for a good time for an interview.

When: September 4, 2026

2.Mr. Jetsada Khangpinit / A student who is new to playing board games.

How contacted: A friend from the same dorm.

When: September 4, 2026

3.Miss Kamonchanok Wongsuk / A person who plays board games often and learns the rules by having other players explain them.

How contacted: Played board games together, so I asked for an interview.

When: September 4, 2026

Gate 2 : MVP shape

FR:

FR-1: Search and Select a Board Game

The system shall allow users to search for and select a supported board game.

FR-2: Learn Through Interactive Tutorial

The system shall provide an interactive tutorial that explains game rules step by step. Users can ask the AI Tutor for additional explanations based on the game's rules.

FR-3: Practice Game Situations

The system shall provide simulated game situations where users can make decisions or choose actions.

FR-4: Evaluate Player Decisions and Provide AI Feedback

The system shall evaluate the user's decisions based on the game's rules and use AI to explain the result and provide appropriate feedback.

FR-5: Complete Understanding Check and Track Progress

The system shall provide rule-understanding checks and allow users to view their learning progress.

Which FR has actual logic or decision-making:

FR-2, FR-3, and FR-4 involve actual logic and decision-making. The system retrieves relevant game rules, analyzes game situations and user decisions, and uses AI to provide explanations and feedback based on the game rules.

Gate 3 : Data / licence / systems that you depend on, and how do you know they're actually accessible:

The system will depend on board game rulebooks, an LLM API, and a database. The team will use accessible and permitted rulebook sources to build the game knowledge base and use an LLM API to explain rules and answer users' questions. We will test the rulebook sources and API with a small prototype before development to confirm that they are accessible and usable.

Processes and Team

SDLC : Agile

We choose Agile because the team can develop the system incrementally, test features early, and improve the AI tutor and user experience based on user feedback.
